

Team Worksheet — Lab 4

Voice of the Customer, Affinity and Kano — In Depth

Team members: _____

Date: _____

1. Our understanding of the problem

2. Our working

Use the data in lab-04-voc-affinity-kano.xlsx.

3. What we produced

Deliverable: A VOC log, an affinity diagram and a Kano classification for your capstone customers.

4. What the evidence does NOT tell us

5. Our conclusion

6. Step notes

Step 1. Recap the VOC sources in full: reactive (complaints, returns, warranty, escalations, social) and proactive (interviews, surveys, gemba, observation).

Step 2. Segment your capstone customers — internal and external. Different segments will give contradictory VOC, and that contradiction is itself data.

Step 3. Collect at least fifteen verbatim statements about your capstone process. Use the customer's own words; do not summarise them into your own.

Step 4. Recap affinity diagram method: silent clustering first to avoid anchoring on the loudest voice, then name the clusters by consensus.

Step 5. Build the affinity diagram for your verbatims. Aim for five to eight named themes.

Step 6. Recap the Kano model in full: Must-Be, One-Dimensional, Delighter, Indifferent and Reverse — and how categories migrate over time as delighters become expectations.

Step 7. Classify each affinity theme against Kano. Note explicitly that Must-Be requirements can only ever cause dissatisfaction, never satisfaction.

Step 8. Identify the one or two themes that most drive your project Y, and record them as your CTQ candidates for the next lab.

Step 9. Note how you would coach a Green Belt through this exercise — what mistake would you expect them to make?

7. Self-check

You have fifteen or more verbatims, every verbatim sits in a named affinity cluster, every cluster carries a Kano classification, and your CTQ candidates trace to specific verbatims.
