

Team Worksheet — Lab 7

Stakeholder Analysis, Resistance Management and Change Leadership

Team members: _____

Date: _____

1. Our understanding of the problem

2. Our working

Use the data in lab-07-stakeholder-analysis.xlsx.

3. What we produced

Deliverable: A stakeholder influence/support map, a resistance diagnosis and an ADKAR change plan.

4. What the evidence does NOT tell us

5. Our conclusion

6. Step notes

Step 1. List every stakeholder in your capstone: sponsor, process owner, operators, support functions, customers, finance, and anyone who can veto.

Step 2. Build the RACI for your project — Responsible, Accountable, Consulted, Informed — and check there is exactly one Accountable per deliverable.

Step 3. Plot each stakeholder on an influence (high/low) versus support (supportive/neutral/resistant) grid.

Step 4. For every high-influence, low-support stakeholder, write a specific named action. 'Communicate more' is not an action.

Step 5. Diagnose resistance type for each resistant stakeholder: technical (they doubt the solution), political (they lose something), or cultural (it conflicts with how things are done).

Step 6. Match the response to the type — technical resistance needs evidence, political needs negotiation, cultural needs leadership modelling.

Step 7. Build an ADKAR plan: how will you create Awareness, Desire, Knowledge, Ability and Reinforcement across the project life?

Step 8. Write the communication plan: audience, message, channel, frequency and owner. Sponsors, operators and customers need different messages.

Step 9. Identify the single stakeholder most likely to derail your capstone, and write your specific mitigation.

7. Self-check

Every stakeholder is plotted on the influence/support grid, every high-influence resistor has a named action matched to a diagnosed resistance type, and your ADKAR plan covers all five elements.
