

Team Worksheet — Lab 32

Building the Steering Committee Presentation

Team members: _____

Date: _____

1. Our understanding of the problem

2. Our working

Use the data in `lab-32-steering-committee-deck.xlsx`.

3. What we produced

Deliverable: A 15-minute steering committee presentation with an appendix of supporting analysis.

4. What the evidence does NOT tell us

5. Our conclusion

6. Step notes

Step 1. Understand your audience: the sponsor wants the business outcome; the process owner wants the operational change; Finance wants the benefit validated.

Step 2. Open with the headline: what the project achieved, what it is worth annually, and what decision you need from the committee.

Step 3. Apply the two-minute rule — if the committee stopped you after two minutes, they should already have everything needed to make a decision.

Step 4. Structure the main body against DMAIC, but at business altitude: the problem, what the data showed, what you changed, what resulted.

Step 5. Select your charts carefully. One before/after comparison, one root cause chart, one control chart showing sustained gain. Resist showing everything you built.

Step 6. Design each chart for a projector at the back of a room: large fonts, direct labels, no unexplained jargon and no default spreadsheet styling.

Step 7. State the statistics in business language. 'The difference is statistically significant ($p = 0.003$)' beats a table of test output.

Step 8. Present the benefit precisely: hard, soft and cost avoidance separated, with the Finance sign-off named explicitly.

Step 9. Present the risks honestly, along with their mitigations. A presentation with no risks reads as naive and invites harder challenge.

Step 10. Close with the specific ask: approve the rollout, release resources, or approve the next project in the portfolio.

Step 11. Build the APPENDIX with your full analysis — regression output, ANOVA tables, DOE design and alias structure, MSA study and control plan. This is where challenges get answered.

Step 12. Rehearse to time. Fifteen minutes means fifteen minutes; overrunning signals you cannot prioritise.

7. Self-check

Your presentation delivers the decision, benefit and ask within the first two minutes, charts are projector-legible, statistics are stated in business language, and every likely challenge has an appendix slide behind it.
